

GWR SAFETY SYSTEMS
SAVING LIVES SINCE 1982

GWR MISSION

To design, develop, and manufacture superior quality safety systems that exceed customer satisfaction requirements with one goal in mind: saving people's lives.

GWR OVERVIEW

For three decades, GWR has been a leader in designing, testing and manufacturing safety restraint systems. GWR started in Barcelona, Spain in 1982, and began manufacturing seat belts for customers around Europe.

Today, GWR has grown into a global company, with production and technical centers in both the United States and Spain, and products in over 70 countries. With the goal to save more lives every year during vehicle crashes, we have an expanding line of products and a deepened desire to create the newest generation of safety restraint systems.

GWR products are found on commercial, industrial, military, emergency and specialty vehicles. Around the world, vehicle and seat original equipment manufacturers, as well as aftermarket distributors, trust GWR for our superior quality and great customer service.

GWR EXPERTISE

COMMERCIAL | INDUSTRIAL | EMERGENCY | OFF-HIGHWAY

GWR is constantly developing more effective seat belts for a growing vehicle market, and many OEMs look to our expertise when designing their seats and vehicles.

Seat Belts are a highly technical product, and their importance is paramount in a time of increasing ground transportation and vehicle evolution. GWR will show you not only the science behind their effectiveness, but also our expertise in using them in a multitude of vehicles and applications, providing you with the confidence you need.

GWR currently specializes in custom seat belts for coaches, buses, trucks, vans, motor homes, emergency vehicles, and off-highway vehicles including military vehicles, agricultural tractors, construction equipment and ATV's.

GWR SAFETY

Piece of mind is something everyone deserves, from the driver at the wheel of the vehicle to the passengers along for the ride. We care deeply about the safety of your customers, and it is our top priority.

We design products with safety in mind, and engineer them to save lives. If the products don't pass the rigorous testing, including dynamic sled tests, we send them back to the drawing board. Nothing makes it to production until we are 100% sure of it's reliability, and nothing goes out our doors without thorough inspection and final testing.

We make sure we do our job before our products have the chance to do theirs. All GWR products are rigorously engineered and tested, well beyond regulatory requirements. So rest assured, whether passenger or driver, you are safe with us.

GWR QUALITY

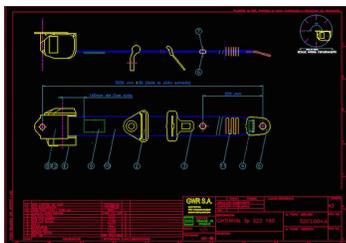

GWR's safety systems do not get second chances, so "zero defects" is not just a goal, but a necessity. Our history of zero defects and zero recalls is something we are proud of, and the result of never compromising on quality and safety. This determination and diligence has earned us the trust of our customers, and we focus every day to keep it.

Our extensive experience with dynamic sled testing allows us to design and engineer superior safety systems. Each design for our client's with specific anchorage points is then tested with a dummy on a dynamic sled to ensure 100% reliability during an accident. We produce only automotive industry quality components, and we manufacture flawless products using mistake proof production methods. We test the components and the system for durability against extended use and harsh environments, as well as to verify their strength. Regular testing to ensure conformity of production is completed, and all products are tested before shipping to give you the quality you expect.

GWR's Quality System is ISO 9001:2008 certified, a requirement of all auto industry suppliers, and our products, machines, and processes are verified by a third party to ensure they exceed the strictest international standards including ECE R16 and FMVSS 209.

GWR VALUE & SERVICE

We are passionate about helping people solve problems. We enjoy seeing the look on our customers faces when we show them possibilities for making their products better. We enjoy discussing technical problems internally, challenging our co-workers, and witnessing satisfaction when they find a better solution. But our customers especially appreciate us solving the challenge of delivering these innovative products at a better value. We do this by evaluating our company holistically, and always looking for ways to become better. We continually refine our processes to streamline operations.

We do all of this while treating our customers well, because we know that the problems we solve together every day can be a pleasure instead of a burden. Our attitude of being responsive, humble and genuine is key to our success. Additionally, we have always offered production flexibility, and provided quick turn-around products when our customers need it. Let's work together to design, engineer, test and build the custom safety systems you need.
